

## Missing Link Vacuum Pump Drive System for VW Airplane Engines

**This vacuum pump drive system has over 1000 hours at speeds greater than the design limits of the pump, at air shows. In some cases the system has run over 8 hours without stopping. In fact, I have tried to tear it up, without any luck. With this system, any VW powered airplane without a vacuum pump system can now have any instruments that the "big boys" have. You will have to have electric ignition with this system. The Vacuum Pump does not come with the drive system. \$395.00 - shipping included. Call R. W. Moore at (706) 779-3446**
